PROFESSIONAL SUMMARY

Passionate Full-Stack MERN Developer with hands-on experience shipping 3 end-to-end web applications using React.js, Node.js, Express.js, and MongoDB. Comfortable across the entire stack — from designing RESTful APIs and JWT-secured backends to building responsive, component-driven frontends with Redux.

EDUCATION

BTech. in Information Technology, Maharaja Agrasen Institute of Technology. **(GPA : 9.680)**
Aug '25 — Present
Delhi, India

Higher Secondary Education, T&TV High School.
May '23
Surat, India

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), Java, C, C++
- **Frontend:** React.js, Redux / Redux Toolkit, Tailwind CSS, HTML5, CSS3, GSAP, Responsive Web Design.
- **Backend:** Node.js, Express.js, REST API Design, JWT Authentication, Middleware Architecture, MVC Pattern.
- **Databases:** MongoDB (Mongoose), MySQL.
- **Dev Tools**: Git, GitHub, Postman, VS Code, Cursor, npm, Vite.
- **Soft Skills:** Team Leadership, Technical Mentoring, Public Speaking, Problem Solving, Communication.

EXPERIENCE

Stabulam
(Software Engineering Intern)
June '26 — Aug '26
Surat, India

- ·Engineered EchoLeads, **a real-time, event-driven AI voice-calling platform** (Node.js, Express.js, WebSockets, Twilio, Deepgram, Groq LLM, ElevenLabs) that dispatches an **AI phone call, email, and WhatsApp message** across 3 channels within **under 1 second** of a lead's form submission.
- ·Re-architected the **speech-to-text → LLM → text-to-speech pipeline** around persistent WebSocket streaming, cutting conversational turn latency by **87% (~4,000ms → ~500ms)**, and resolved critical barge-in and memory-leak bugs to make the system production-stable.

PROJECTS

EchoLeads (Real-Time AI Outbound Voice Agent) Github Link

- **Technologies:** Node.js, WebSockets, Twilio, Deepgram (STT), Groq (Llama 3.1), ElevenLabs
- **Description & Contributions:**
  - Engineered full-duplex **WebSocket audio streams**, slashing AI conversational latency from **4s (HTTP) to <800ms.**
  - Achieved **<150ms conversational barge-in** using Deepgram VAD to instantly flush Twilio buffers upon human interruption.
  - Integrated **RAG** for zero-hallucination LLM responses and built a RegEx token-buffer to eliminate robotic TTS stuttering.

Staybnb (FullStack Web App) Github Link

- **Technologies:** React.js, Express.js, MongoDB, Node.js, CSS, REST API
- **Description & Contributions:**
  - Developed a user interface for property **listings, search, and booking** using **React**.
  - Built **RESTful backend APIs** with Express.js to manage users, listings, and bookings.
  - Implemented persistent **data storage** in MongoDB (using Mongoose) for listings and user data.
  - Added **user authentication**, **form validation**, and **error handling**.
  - Learned how to architect a **full-stack web application** and **manage state & data flow**.

ResumeForge (AI-Powered ATS Scanner) Github Link

- **Technologies:** React.js, Tailwind CSS, Python, FastAPI, spaCy, Groq AI
- **Description & Contributions:**
  - Built a full-stack ATS scanner using React.js and Python/FastAPI, reducing manual review time by **85%.**
  - Engineered an **NLP pipeline** using spaCy for semantic skill matching with **90%+ accuracy.**
  - Integrated Groq AI to build a **"Smart Bullet Fixer"** that dynamically rewrites metric-less sentences.
  - Designed a **real-time analytics dashboard** evaluating 4 critical ATS pillars with dynamic error states.
